

SimpleBank (API-only)

Build a small **REST API service** called **SimpleBank** with basic bank account functionality.

API Features

1. User Registration & Authentication

- Endpoint to register a new user (email + password).
- Endpoint to log in and obtain an auth token.
- When a new user is registered:
 - Automatically create a bank account with a **unique 10-digit account number**.
 - Deposit **€10,000 welcome bonus**.

2. Account & Transactions

- Endpoint to get current balance.
- Endpoint to list all transactions of the authenticated user.
 - Each transaction should include: amount, type (credit/debit), and timestamp.
 - Allow optional filtering by date range (from / to).

3. Transfers

- Endpoint to transfer money from the authenticated user's account to another user's account.
- Apply a transfer fee: **2.5% of the amount or minimum €5**.
- Record both debit (sender) and credit (receiver) in transaction history.

Evaluation criteria

- Correctness: endpoints work as expected (register, auth, transfer, history).
- Code and commits clarity and structure.
- Proper handling of balances and transactions (atomic operations).
- RESTful design and use of ORM.
